Easy-to-use label printer

connecting to Unisystem's marine scales

Printer unit in stainless steel housing

High quality label printer in a stainless steel housing, IP67.

Prints thermal labels and can be connected directly to Unisystem's marine scales.

Can be used in a wet environment, below deck.

Printer only (alternative)

A high quality and compact desktop label printer.

Prints thermal labels. Wired connection to Unisystem's marine scales without the need of any PC or laptop. Ideal for use in the wheel house.

Labels

Thermal labels, width 102 mm. Very good adhesive on e.g. wet fish boxes and crates.

Print weight in kg (simple version) or weight, vessel name and logo (optional version).

Easy solution for printing labels

Specifications

Connection:	RS232
Powered by:	230VAC (with heating element) or 24VDC
Resolution:	203 DPI
Print width:	102 mm

B02860

The complete printer unit

This unit consists of a high quality thermal printer built in a stainless steel housing (EN 1.4301, SAE 304). It can be connected to every Unisystem marine scale and can be used for labelling below deck in harsh and wet conditions.

If powered by 230 VAC the unit comes with a heating element to avoid damp and moisture in the housing to make it more durable, even after long time-use. Easy connection by a RS232 cable between the scale and the printer. Standard cable length 3 metres, but up till 50 metres is possible as an option. The printed labels are feed out of the stainless steel enclosure, making it easy to remove the label after each print.

This printer unit can easily be connected to our eSeaSystem in the future and has a warranty time of 6 months.

The printer only

As a cost effective alternative we offer the printer only, without the stainless steel housing. In this case the printer has to be installed in the wheel-house or in a dry place.

This printer operates on 230VAC or 24VDC. Connection to the scale via RS232 cable in various lengths (optional). No heating element, less standard label possibilities and 6 months warranty for printer and printing head.

The labels

Our thermal labels have a special adhesive to fasten on e.g. wet and cold fish boxes, crates and containers. The width of 102 mm gives the possibility to print large and easy readable information.

Standard size 102 x 48 mm, delivered on a roll (1000 pcs). The first showed label comes with the complete printer unit. Besides the weight in kg's you can choose which additional information you want on the label such as vessel name, company name and company logo.

The second label is the simple version which comes with the printer only. It shows the weight in kg. If more information is required, e.g. vessel name or company logo the label can be customized optionally.
